

White Memorial Medical Center New Main Patient Tower

Los Angeles, California

Project Information

Owner

White Memorial Medical Center

Architect

KMD Architects

Gross Building Area

Hospital: 345,000 SF
177 Patient Beds

Projected Duration

Hospital Tower 25 months

Project Highlights

- Project is one of the first using Design-Build delivery processed through OSHPD
- New Main Entry Lobby ties existing buildings to the new Patient Tower
- Building utilities are hooked onto the renovated Central Plant across Boyle Avenue by way of new connecting tunnel
- All construction conforms to SB1953, inclusive of remodeled areas in existing facilities

Located in the heart of Los Angeles, the White Memorial project consists of a new Patient Tower and the renovation of existing facilities. This project is one of the first OSHPD projects to use a design-build delivery process. The new 6-story patient tower is located directly south of, and replaces, the existing tower. The project and move-ins are phased to allow for continuous uninterrupted hospital operations.
